Mr. Gi Yong Seo

Mr. Seo, kindly accept this gift of the book titled "Drinking Water, Physics, Chemistry and Biology "by Vladyslav V. Goncharuk published in 2014 by Springer.

I believe that as an engineer, you will instantly recognize this book is meant for a professional. It is meant for someone in a leadership position as you are, to understand the complexities of how Physics, Chemistry and Biology come together to make Water the essential ingredient for all Life on this beautiful Planet Earth.

Mr. Seo, I ask you not to lead Samsung into what we will be an Environmental Disaster that will tarnish your company's brand for years. Destroying Freshwater Resources anywhere on this planet is a sin against Mother Earth and a sin against humanity.

I ask you to use your considerable influence and wisdom to halt the North Kent 1 Wind farm Project that will unquestionably destroy a Canadian Aquifer thru heavy metals contamination and expose the local community who financially depends on this water source to undue hardship and medical risks.

I have written to you twice before but I have not received any correspondence from you or from Samsung Canada. I note that Samsung executives were copied in an email from the MOECC, Ontario Ministry of Environment and Climate Change within 24 hours of my first hand delivered letter to you at your Corporate Headquarters.

Clearly Samsung Executives are keenly aware of your Brand exposure to negative publicity in destroying or tainting water to the point it no longer becomes a reliable source of water for human consumption.

Please Halt the North Kent 1 wind farm Project. Do not damage it further.

Please contact me to discuss how the Pumfrey family with a toddler, a 4-year-old and a 7-year-old who your Project manager allowed the illegal construction of a meteorological control tower with a pile driven foundation for the NKW 1 wind farm without the appropriate MOECC REA Permit and ruined their water well. The Pumfrey family requires an immediate water line as a water line is the only reliable safe long term supply of potable water to a rural home.

Please immediately halt the fraudulent Community Liaison Committee being conducted by your consulting engineering firm AECOM Ltd. Despite MOECC Minister's Glen Murray's assertions, the venue proposed by AECOM is in clear violation of the written REA Conditions.

Mr. Gi Yong Seo

Mr. Seo, I ask you to step back from the brink of an Environmental Disaster your corporation is investing in with the North Kent 1 wind farm in the Municipality of Chatham-Kent, in Ontario Canada.

Mr. Seo, I ask you to step back from the obvious negative repercussions from the negative publicity this will mean for the Samsung Brand.

If I cannot get your agreement on this critical matter of protecting a population's water supply then Water Wells First will have no option but to call for a Global Boycott of Samsung's retail products beginning with the Galaxy 8.

You can tell we are passionate about protecting our Water Mr. Seo.

Water Wells First isn't just a local farm community, it's a global movement to stop the unnecessary destruction of groundwater. Groundwater that so many of us rely on.

I hope we can speak to each other soon.

The AECOM Liaison meeting is scheduled for tomorrow night and if that meeting progresses than we have no choice but to marshal World Opinion to call for a Samsung product Boycott.

Sincerely

Kevin Jakubec

Spokesperson for Water Wells First
